Abakus plus d.o.o.

ORACLE | CERTIFIED PROFESSIONAL

18. Strokovno srečanje

SIOUG 2013

14.-16. oktober 2013

Controlling a large number of databases

Abakus plus d.o.o.

ORACLE Gold Partner

History

from 1992, ~20 employees

Applications:

special (DB - Newspaper Distribution, FIS - Flight Information System)

ARBITER - the ultimate tool in audit trailing

APPM - Abakus Plus Performance and Monitoring Tool

Services:

DBA, OS administration , programming (MediaWiki, Oracle)

networks (services, VPN, QoS, security)

open source, monitoring (Nagios, OCS, Wiki)

Hardware:

servers, SAN storage, firewalls

Infrastructure:

from 1995 GNU/Linux *(18 years of experience !)*

Oracle on GNU/Linux: since RDBMS 7.1.5 & Forms 3.0 *(before Oracle !)*

>20 years of experience with High-Availability !

Performance (1)

- test 1 (notebook with SSD, DB on VM):
max_iops = **9.983**, latency = **8**, max_mbps = **251**
- test 2 (test DB on EMC, 10x 600 GB 15k FC):
max_iops = **1.824**, latency = **11**, max_mbps = **280**
- test 3 (production DB on EMC, 30x 146 GB 15k FC):
max_iops = **6.498**, latency = **10**, max_mbps = **455**
- test 4 (Abakus SAN, 16x SSD, Infiniband 40G):
max_iops = **43.782**, latency = **0**, max_mbps = **1.727**

Performance (2)

Daily DBA to-do list (1)

- check space
- check object status
- monitor alert log
- back up parameter file
- check users
- check backup
- check standby
- check RAC status and services

Daily DBA to-do list (2)

- check redo logs
- check listeners
- check connectivity
- check block corruptions
- database parameters
- housekeeping
 - cleanup trace files
 - cleanup audit files
 - cleanup alert log
 - cleanup listener log

Checking space

- disk space
 - archived logs
 - audit files
 - trace files
- ASM space
- tablespace space
 - autoextensible

```
ORA-00257: archiver error. Connect internal only,  
until freed.
```

```
ORA-09817: Write to audit file failed No space left on  
device
```

```
ORA-01690 - 01695: unable to extend ...
```

```
ORA-30036: unable to extend segment by 8 in undo  
tablespace 'UNDOTBS1'
```

Checking object status (1)

- invalid objects

```
SELECT e.owner, e.type, e.name, e.line, e.position,  
       e.text, e.attribute, e.message_number  
FROM   dba_objects o, dba_errors e  
WHERE  e.owner = o.owner  
       AND e.name = o.object_name  
       AND e.type = o.object_type  
       AND o.status = 'INVALID'  
       AND e.message_number != 0  
ORDER BY o.owner, o.object_type, o.object_name,  
        e.sequence, e.line;
```

Checking object status (2)

- invalid objects

OWN	TYPE	NAME	LINE	POS	TEXT	ATTRIBUTE	MESSA

Database parameters

Category: appm_db

control_file_record_keep_time [7] is to low. Set to at least [45]!

ERROR: compatible parameter is set to [10.2.0.1.0] but it should be [11.2]!

optimizer_secure_view_merging parameter [TRUE] is set to [TRUE], for faster SQL processing set it to [FALSE]!

>

> CAUTION (for APPM administrators): if the security is in question, then disable check and leave the parameter at current value!

> For additional info look into the documentation!

>

db_ultra_safe parameter is set to [OFF], this is not recommended way!

>

> Set it at least to [DATA]!

>

db_lost_write_protect is set to [NONE], this is not recommended way!

>

> Set it to [TYPICAL] or leave empty and set DB_ULTRA_SAFE parameter!

> alter system reset db_lost_write_protect;

> For additional info look into the Oracle Support Notice:

> - Best Practices for Avoiding and Detecting Corruption [ID 428570.1]

--

Critical error(s) [1] detected in the database parameters!

Housekeeping

- cleanup trace files
- cleanup audit files
- cleanup alert log
- cleanup listener log

Reporting

- create check scripts
- periodically run in cron
- sending mail from scripts
- many databases?
- report when check failed
 - How do you know that error is fixed?
 - How do you know that check script itself has not failed?
- many DBAs work on same problem?

Conclusion

- cron and mail solution
 - works for small number of databases and for one DBA
- with many databases it becomes confusing

APPM monitor: User roles

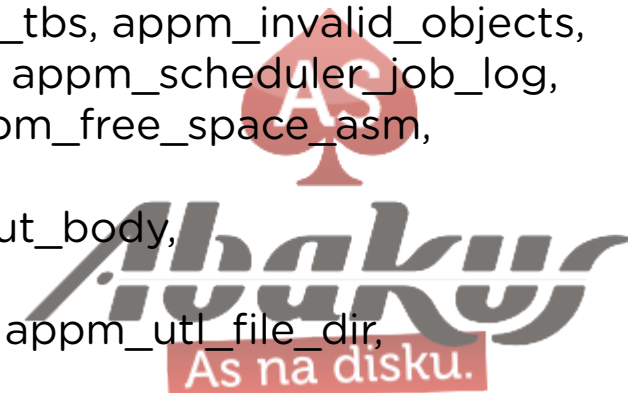

- Database and System Administrators
 - have full access to appm-monitor app
 - they manage supervised hosts
 - but **might** not have privileges to access all of them
- Users
 - have limited access (only their servers)
 - can filter checks by category (write their own application checks)

APPM monitor: Checks

- Oracle PL/SQL Procedures
- bash Scripts
- imported from Nagios
- Currently available over 30 out of the box checks!
 - os_diskspace, asm_disks, asm_voting_disks, asm_space, db_standby, db_listener, db_srvctl, db_alert_log, db_redo, db_parameters, db_health, appm_outstanding_alerts, appm_temp_seg_in_perm_tbs, appm_invalid_objects, appm_rman_backup, appm_dictionary_integrity_hm, appm_scheduler_job_log, appm_synonyms, appm_free_space_tablespaces, appm_free_space_asm, appm_users_with_defpwd, appm_block_corruption, appm_diagnostic_repository, appm_packages_without_body, appm_datapump_jobs, appm_service_per_instance, appm_auto_segment_advisor, appm_datafile_status, appm_util_file_dir, ext_appm_backup, ext_copy_logs, ...

Custom bash ckeck

```
source "$APPM_HOME/bin/lib/envchk.sh"  
proc_chk_external \  
    "$1_check_name" \  
    "$1_check_result" \  
    "$1_check_category" \  
    "$1_check_message" \  
    "file:$1_full_report" \  
    "$1_db_sid"
```

Custom PL/SQL check

```
/**
 * Write check to file
 * */
PROCEDURE write_check (
  p_check_name      IN VARCHAR2,
  p_check_result    IN NUMBER,
  p_check_category  IN VARCHAR2 := 'user',
  p_check_message   IN VARCHAR2 := NULL,
  p_check_time      IN DATE := SYSDATE,
  p_full_report     IN CLOB := NULL);
```

APPM scripts: bash environment

```
oracle@paris:~  
File Edit View Search Terminal Help  
oracle@paris:~$  
oracle@paris:~$  
oracle@paris:~$ source appm/abaenv.sh orasid  
oracle@paris [orasid] ~ $
```

APPM scripts: Help

```
oracle@myhost [11g] ~ $ stdbby_fixgap_recover.sh --help
```

```
Usage: ./stdby_fixgap_recover.sh [ --option1="value1" ]  
> Recover standby database using RMAN incremental backup.
```

Options:

- backup-dir=
Path to RMAN backup files.
- backup-tag-ctrl=
RMAN tag for backup of controlfile.
(default is 'STANDBY_FIX_CTRL')
- backup-tag-diff=
RMAN tag for backup of incremental datafile backup.
(default is 'STANDBY_FIX_DIFF')
- help
